

SYSTRA secures place on Anglian Water framework

SYSTRA Limited has won a place on Anglian Water's framework for hydrological surveys and assessments.

The services provided will support the water company's capital delivery and environmental programmes and inform planning, permitting, design, and construction activities across a range of infrastructure projects and enabling works in the East of England.

Nick Salt, CEO of SYSTRA Limited, said: "Securing a place on the Anglian Water framework is an indicator of our growing reputation in the water market.

"SYSTRA brings expertise and experience from a range of projects in the transport and infrastructure sectors to our water clients, always with safety, sustainability and innovation at the core."

The service scope includes, among others:

- Baseline hydrological surveys
- Flood risk assessments and modelling
- Hydrological Impact Assessments (HIA) and input to Environmental Impact Assessments (EIA)
- Post-construction hydrological monitoring and reporting
- Support for statutory consultation and planning submissions
- Data analysis, GIS mapping, and reporting in line with regulatory and project-specific requirements.

The framework will also cover a range of environmental monitoring programmes, including:

- Monitoring activities under the Anglian Water Services (AWS) Drought Plan, which may overlap with ecological surveys. This includes transitioning between baseline, pre-drought, drought permit, and post-drought monitoring frequencies, currently active across seven areas in the AWS region.
- Monitoring for AWS Environmental Destination Investigations, particularly short-term data collection to strengthen the evidence base for sustainable abstraction as part of the current Asset Management Period (AMP8) Water Industry National Environment Programme (WINEP).
- Baseline and ongoing monitoring to support capital projects and other AMP8 initiatives, ensuring robust data informs project development, design, and consenting.

About SYSTRA

SYSTRA in the UK and Ireland leads the delivery of sustainable transport, infrastructure and built environment solutions through specialist engineering and consultancy services.

A world-leader in transport and mobility, we deliver planning and development consultancy, engineering design, project management, and specialist technical services that enable the safe and efficient movement of people, goods and essential services.

Across the water and environment and energy markets, we support clients to plan, develop and deliver resilient infrastructure and transition to a low-carbon, secure and more resilient energy system.

With around 1,000 employees in the UK and Ireland, and 12,000 globally, we match global expertise to local insights, with a shared ambition is to help the world move forward.
